The powerful and multi-functional AK 36/4000 is characterized by impressive working ranges and high loads on a compact 11.99 t chassis. Despite its low weight, this crane reaches a maximum radius of 16 m with a load of 1000 kg. In addition to that it impresses by its excellent price-performance ratio.

The specific design of our AK 36/4000 reduces the slew radius to a minimum. Therefore it can also be set up at the side of the road while the traffic is still running. Like all other Bocker cranes, the AK 36/4000 can accurately telescope in and out with a load thanks to its strong aluminium boom.
